

ICS Solutions

BizTalk Advantage Program

from the UK's leading BizTalk Partner

Combining method and know how to help organisations solve a variety of business challenges using Microsoft BizTalk in a flexible, rapid and viable manner

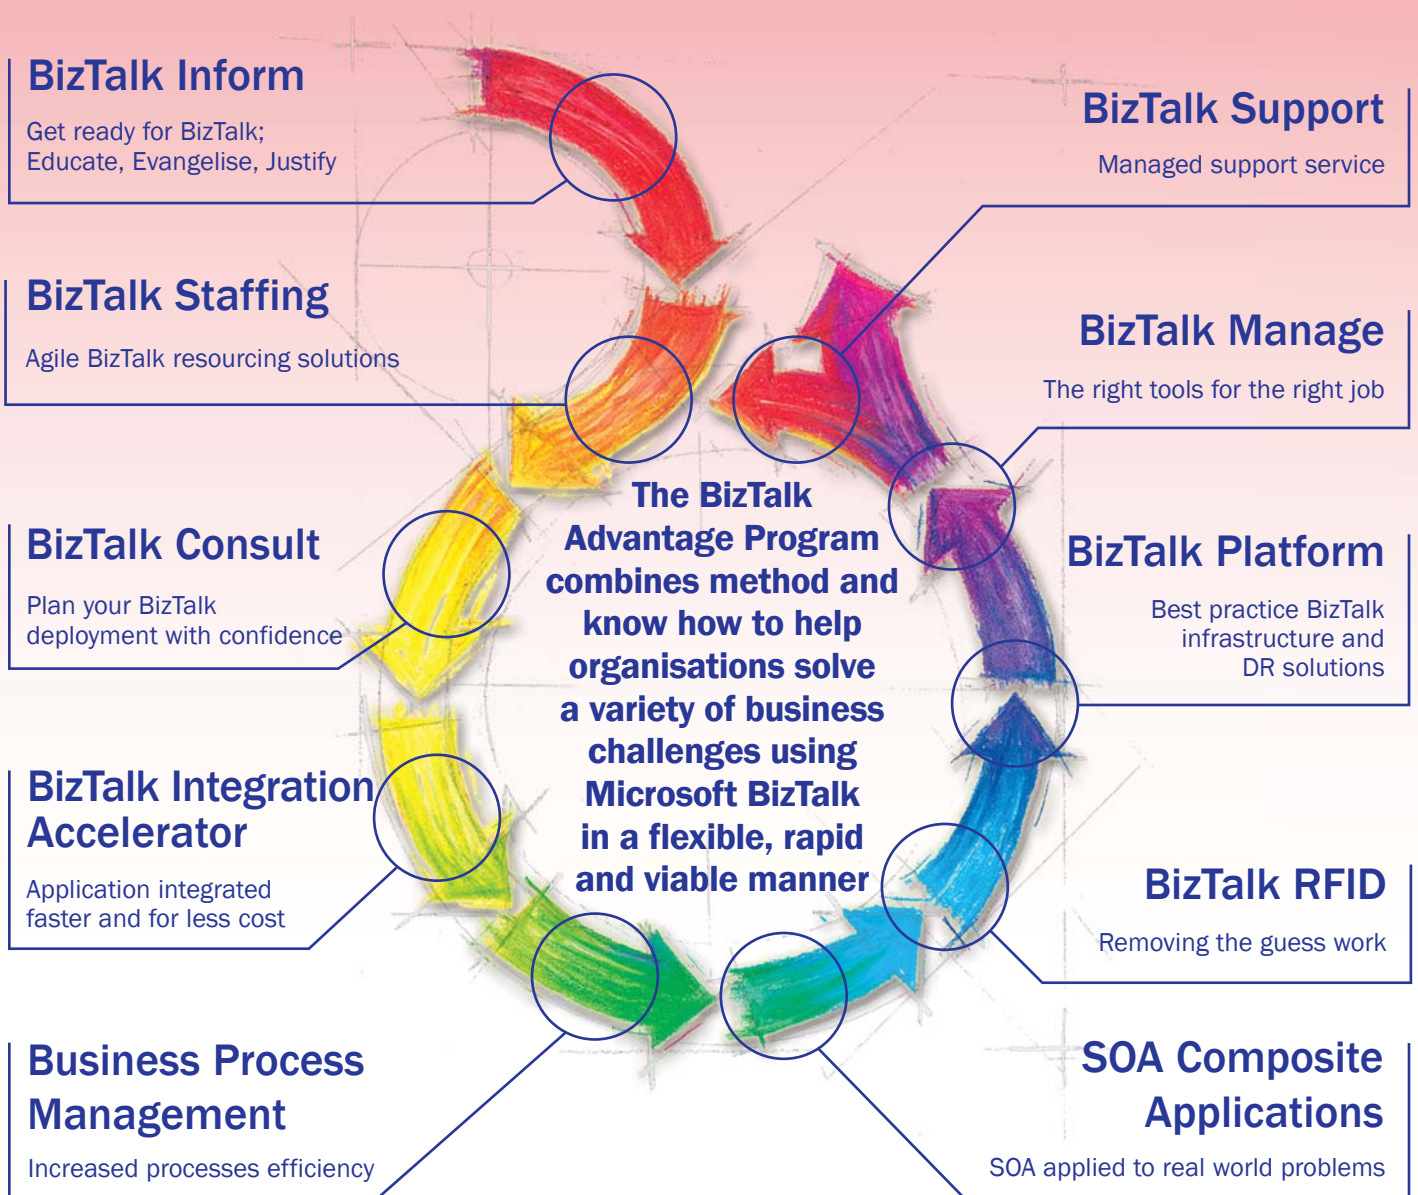

The BizTalk Advantage Programme

The BizTalk Advantage Program from ICS Solutions is a framework of options that combines method and know how to help organisations solve a variety of business challenges using Microsoft BizTalk in a flexible, rapid and viable manner.

With over 7000 customers worldwide, including 90% of the Fortune Global 100, BizTalk Server is a trusted solution for business-to-business integration, service-oriented architecture (SOA) and business process management.

ICS Solutions have been a Microsoft Gold Certified Partner for over 10 years. With over 50 successful engagements and access to over 200 BizTalk experts, ICS Solutions are the UK's leading BizTalk partner. In the past two years, almost 2,000 people have attended our seminars to learn about BizTalk technologies and the business and technical benefits it can deliver.

ICS Solutions – The UK's leading BizTalk Partner.

A flexible suite of ten options that ensure your BizTalk success

► BizTalk Inform

We deliver more free BizTalk education through our seminars than any other UK partner. Our BizTalk workshop focuses on your specific challenge and identifies the solution, while our business case service helps you justify the investment.

► BizTalk Staffing

With 24/7 global resourcing support and exclusive access to our DreamTeam portal – offering the largest pool of BizTalk experts in the UK for both contract and permanent assignments – we take the pain out of your Microsoft recruitment needs.

► BizTalk Consult

Our Microsoft BizTalk Consult Services are a suite of offerings providing all the support you need to plan your BizTalk deployment with confidence. Whatever your requirements, our customised services will ensure your project is a success.

► BizTalk Integration Accelerator

A managed service designed to dramatically reduce the time cost and risk of integrating business applications. Enterprise Application Integration (EAI) is the process of linking together applications within a single organisation in order to simplify and automate business processes to the greatest extent possible, while at the same time avoiding having to make sweeping changes to the existing applications or data structures.

► Business Process Management

Business Process Management (BPM) is a field of management focused on aligning organizations with the wants and needs of clients. The Microsoft BPMS software platform delivers a robust solution supporting integrated, automated and optimised business processes. It complements and leverages the work that IT organisations have made in their existing investments, while also providing a powerful foundation for new service oriented architectures based on XML and Web Services. Service-Oriented Architecture (SOA) helps solve traditional problems associated with application development, including lengthy development cycles, poorly translated business specifications, and solution inflexibility when business needs change.

► SOA Composite Applications

Composite applications are great way to surface information out of Service-Oriented Architecture. Having different LOB applications as services makes it easier to build support for cross-functional processes into a composite application. This ability to surface data from LOB applications helps in providing the right data to the right user at the right time in the right place.

► BizTalk RFID

Radio Frequency Identification (RFID) is a data collection system based on tiny microchips attached to a box, pallet or individual item that communicate with other devices using radio waves. Device readers capture data from the tags and, in some cases, write to them as well. Software then collects, organizes and distributes the data. The combination of these chips, sensors and software technology vastly improves supply chain operations and is increasingly providing substantial business benefits in other contexts. The Microsoft RFID infrastructure enables compliance, automation, and business process transformation while shielding users from changing standards and regulations.

► BizTalk Platform

Ensure that your BizTalk Server environment provides a secure and scalable platform for your mission critical applications. Flexible packages address every aspect of your deployment, including: capacity planning, server farm design, installation and configuration, Back up, maintenance and disaster recovery plans and SQL Server clustering or mirroring.

► BizTalk Manage

Guarantee that your BizTalk platform operates at peak technical efficiency and performance. BizTalk Manage gives you hands-on assistance in applying Microsoft BizTalk and industry best practices and knowledge to achieve significant, measurable and sustained improvements in operational performance.

► BizTalk Support

Our BizTalk Support offering provides 3rd line support and expertise for your BizTalk platform and solutions, including: on and off site consultancy, application and platform element support, a dedicated Technical Account Manager, extensive Escalation options including Microsoft Certified Consultants and remote access monitoring and fault resolution.
