

Process-driven applications – fast.

The K2 platform is for delivering process-driven applications that improve business efficiency. Visual tools make it easy for anyone to assemble reusable objects into applications that use workflow and line-of-business information. K2-based solutions are deployed by a growing number of the global Fortune 100. K2 is a division of SourceCode Technology Holdings, Inc. based in Redmond, Washington, and has offices all over the world.

PRE-ORDER BETWEEN NOW AND RTM FOR
A 25% DISCOUNT ON LICENSE FEES.

K2[blackpoint][™]

SharePoint workflow. More features. No code.

K2 blackpoint[™] is for SharePoint users who want visual tools to build workflows and process-driven applications quickly – without code, without complexity.

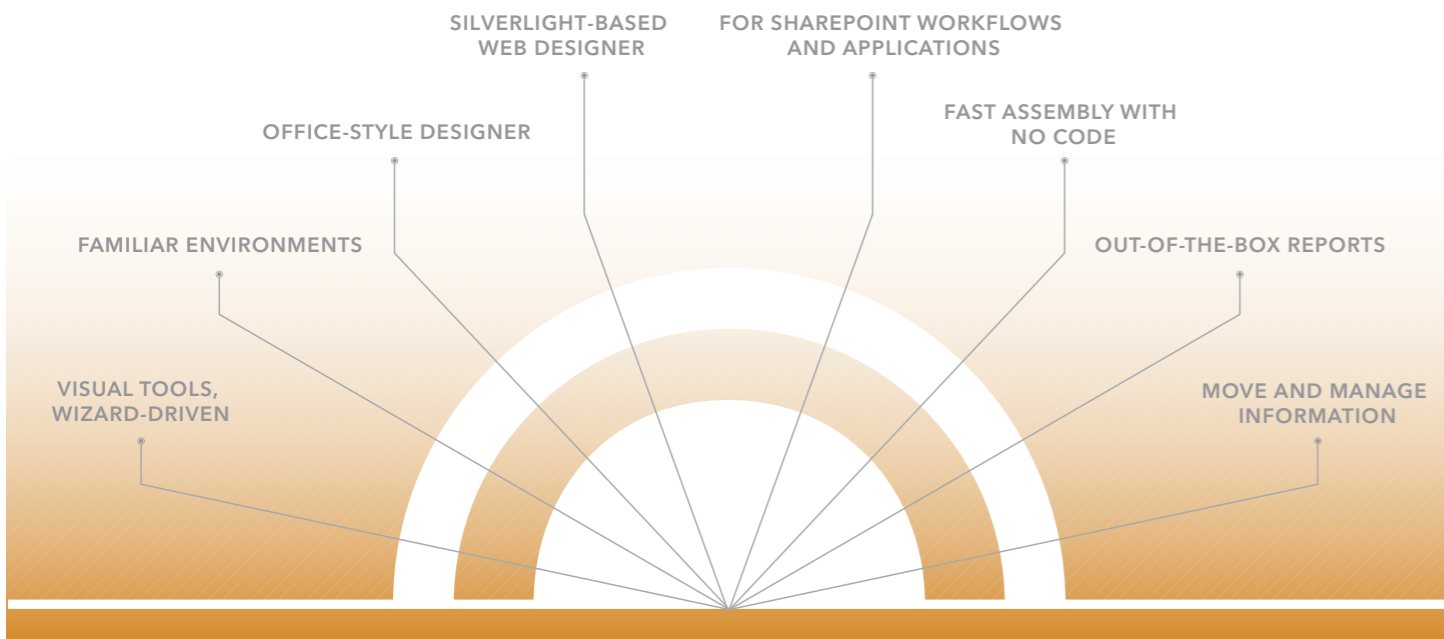

K2 blackpoint has a powerful Office-style designer (K2 Studio) and a Silverlight-based K2 Web Designer* that provides profound simplicity. Non-developers and business users can use K2 blackpoint to create new SharePoint workflows that span libraries, sites, InfoPath forms, server farms and organizations; manage approvals; and route documents and list items. With K2 blackpoint, everything is visual and wizard-driven, everything can be built without code, and users can assemble new applications from information that already exists.

K2 blackpoint's price point – starting at just \$5,000 – is competitive with other low-cost offerings, so it's easy to get started with workflows and process-driven applications.

And because it's a subset of K2 blackpearl[®] features, K2 blackpoint offers an upgrade path so organizations can grow their investment and add capabilities over time, if needed.

* K2 blackpoint will be released to market with the K2 Studio designer and a beta version of the Silverlight-based K2 Web Designer. The complete version of the Silverlight-based designer will be released later this year to customers current on their K2 blackpoint Technical Support and Software Maintenance contract.

K2 BLACKPOINT FEATURES

VISUALLY DESIGN PROCESSES AND APPLICATIONS.

- > Build SharePoint workflows and applications using a familiar Office-style designer (K2 Studio) or the Silverlight-based K2 Web Designer for SharePoint.
- > Leverage contextual information about sites, libraries and users.
- > Define what actions are available to users of the process.
- > Use SharePoint users and groups as destinations.

USE K2 BLACKPOINT CAPABILITIES TO MAKE WORK EASY AND INCREASE EFFICIENCY.

- > Manage list items, documents, libraries, Web content, sites and workspaces, and records.
- > Build processes that move information and documents between libraries and lists across SharePoint sites and servers.
- > Surface information through process portals.
- > Integrate with SharePoint workflow.
- > Surface tasks through the K2 Worklist Web Part.
- > Leverage existing functionality and information via Web and Windows Communication Foundation services.
- > Applications can be set up to handle simple tasks or to manage complex scenarios.

LEVERAGE OUT-OF-THE-BOX FEATURES FOR FAST PROCESS ASSEMBLY.

- > SharePoint forms are automatically created, based on process design.
- > Reports provide visibility into the business.
- > Wizards guide users through configuration of check-in, check-out, move, copy and deletion of documents and list items, as well as e-mail notifications.
- > Provided "outcome templates" define actions a user can take.
- > Store frequently-involved users as favorites for quicker assembly.

K2 BLACKPOINT FEATURES

WORK IN FAMILIAR ENVIRONMENTS AND WITH INTUITIVE TOOLS.

- > Workflows are accessed through standard SharePoint menus.
- > Workflows can be initiated manually or as a result of events.
- > Tasks are available in SharePoint task lists and can surface tasks federated across all sites, processes and SharePoint servers.
- > Tasks can be surfaced in Outlook through SharePoint task synchronization.
- > Tasks are available through the Office Business Bar.
